

Why Do Insured's, Insurance Adjusters, and Lawyers Use Our Service?

INSURED

- Determines the cause and origin of your water intrusion problems and other home/building/vessel defects
- Documents loss claims for insurance purposes
- Gets the most money possible for your insurance claim since infrared will show you, visually, more than your claims adjuster will be able to determine using their conventional inspection methods
- Compares what your insurance claim will do for you against exactly what needs to be done to remediate your claim from the infrared perspective
- Provides for peace of mind that your claim has been successfully remediated to your satisfaction
- Allows one to focus efforts on mold prevention, rather than buying an expensive mold insurance coverage policy

INSURANCE ADJUSTERS

- Significantly reduces the cost and time required to determine with certainty the liability for water intrusion, including mold contamination
- Facilitates the selection of agencies and trades for repair/restoration
- Allows for needed repairs to be made with maximum speed and assurance
- Helps to assure that money is not spent unnecessarily on areas not needing attention
- Documents as built or post-repair/restoration condition
- Protects against frivolous complaints and litigation

PLAINTIVE/DEFENDENT LAWYERS

- Insurance claims relative to water intrusion rely on establishing the cause of the loss. Thermal imaging techniques can provide irrefutable evidence of water related loss, sometimes even years after the event.
